Statement by Doosan Škoda Power on media reports concerning negotiations between KHNP and the consortium of Daewoo Engineering & Construction and Doosan Enerbility regarding the construction scope of the Dukovany new nuclear power plant project

In connection with the recent information concerning negotiations between KHNP, Daewoo Engineering & Construction and Doosan Enerbility regarding the construction scope of the Dukovany new nuclear power plant project, we would like to clarify that these negotiations do not concern Doosan Škoda Power's separate contract for the supply of the steam turbine for the Dukovany project.

Doosan Škoda Power was not a party to the negotiations concerning the construction scope and was not informed in advance of their progress or outcome.

Daniel Procházka, COO of Doosan Škoda Power says: *"For Doosan Škoda Power, the situation remains unchanged. Doosan Škoda Power is not involved in the construction scope of the project; our role concerns the supply of technology, specifically the steam turbine and its associated equipment. Currently, we are in intensive discussions with KHNP for additional supply of related turbine island equipment. Our contract for the supply of the steam turbine for the Dukovany project, which was signed at the beginning of this year, remains fully in force, and we continue to fulfil our contractual obligations in accordance with the agreed schedule. We remain fully focused on meeting our commitments and successfully delivering our part of the project."*

Doosan Škoda Power fully recognizes the importance of the Dukovany new nuclear power plant project for the Czech energy sector and remains focused on the proper fulfilment of its contractual obligations and the successful delivery of its part of the project.

ABOUT DOOSAN ŠKODA POWER

Doosan Škoda Power is part of a strong group of companies united under the Doosan Group, which supplies leading technologies and services of the highest quality and value to customers all over the world.

Doosan Škoda Power is a leading global manufacturer and supplier of power plant equipment, especially steam turbine/generator sets with outputs between 3 and 1,300 MW. The company has extensive experience and references in delivery and commissioning of applications for steam-driven and fossil-fuel-fired power plants, CHPs, nuclear and solar power plants (CSPs), biomass plants, energy-from-waste plants and in industrial applications for oil and gas, pulp and paper, and many more. As regards services, the company offers retrofits and modernization (R&M) of installed OEM and non-OEM equipment, overhauls and long-term service including spare parts delivery. Annual research and development investments guarantee high quality products that meet specific customer requirements.
